

Please amend the present application as follows:

Claims

The following is a copy of Applicant's claims that identifies language being added with underlining ("___") and language being deleted with strikethrough ("—") or bracketing ("[[]]"), as is applicable:

1. (Currently amended) A method performed on an information appliance for printing a document stored on a remote computer, the method comprising:

providing a connection between an information appliance and a remote computer, wherein the remote computer stores one or more documents in a user mailbox;

transmitting information regarding a list of user mailbox documents stored on the information appliance from the information appliance to the remote computer;

receiving synchronization information from the remote computer, the synchronization information comprising one or more references to one or more documents stored ~~on~~ in the remote computer user mailbox that are available to a user for printing;

updating the list of user mailbox documents stored on the information appliance using the synchronization information received from the remote computer;

displaying the updated list of user mailbox documents to the user on a display of the information appliance;

receiving a selection of one or more documents from the displayed list of user mailbox documents;

receiving a command to print the one or more selected documents; and

responsive to receiving the command to print, transmitting a print request to a nearby printer that instructs the printer to ~~print~~ retrieve the one or more selected documents from the user mailbox and print the one or more selected documents.

2. (Original) The method of Claim 1, wherein the print request is transmitted over a wireless connection between the information appliance and the nearby printer.

3. (Original) The method of Claim 2, wherein the wireless connection conforms to the Bluetooth technology.

4. (Canceled)

5. (Currently amended) The method of Claim 1, wherein the print request comprises ~~the mailbox server's~~ server identification information.

6. (Original) The method of Claim 1, wherein the print request comprises one or more references identifying the one or more selected documents.

7. (Currently amended) The method of Claim 1, wherein the print request comprises [[a]] user identification information.

8. (Original) The method of Claim 1, wherein the remote computer is a mailbox server.

9. (Original) The method of Claim 1, wherein the information appliance is a wireless phone.

10. (Original) The method of Claim 1, wherein the information appliance is a personal digital assistant.

11-14. (Canceled)

15. (Currently amended) A computer-readable storage medium having stored thereon computer instructions that, when executed by an information appliance, cause the information appliance to:

provide a connection between an information appliance and a remote computer, wherein the remote computer stores one or more documents in a user mailbox;

transmit information regarding a list of user mailbox documents stored on the information appliance from the information appliance to the remote computer;

receive synchronization information from the remote computer, the synchronization information comprising one or more references to one or more documents stored ~~on~~ in the remote computer user mailbox that are available to a user for printing;

update the list of user mailbox documents stored on the information appliance using the synchronization information received from the remote computer;

display the updated list of user mailbox documents to a user on a display of the information appliance;

receive a selection of one or more documents from the displayed list of user mailbox documents;

receive a command to print the one or more selected documents; and

transmit a print request to a nearby printer in response to receiving the command to print that instructs the printer to ~~print~~ retrieve the one or more selected documents from the user mailbox and print the one or more selected documents.

16. (Original) The computer-readable storage medium of Claim 15, wherein the print request comprises user identification information.

17. (Original) The computer-readable storage medium of Claim 15, wherein the print request comprises identification information for the remote computer.

18-20. (Canceled)

21. (Previously presented) The computer-readable storage medium of Claim 15, wherein the print request is transmitted over a wireless connection between the information appliance and the printer.

22. (Previously presented) The computer-readable storage medium of Claim 21, wherein the wireless connection conforms to the Bluetooth technology.

23. (Previously presented) The computer-readable storage medium of Claim 15, wherein the print request comprises one or more references identifying the one or more selected documents.

24. (Previously presented) The computer-readable storage medium of Claim 15, wherein the computer-readable storage medium is provided in a wireless phone.

25. (Previously presented) The computer-readable storage medium of Claim 15, wherein the computer-readable storage medium is provided in a personal digital assistant.

26. (Currently amended) The method of Claim 1, wherein the information regarding a list of documents stored on the information appliance comprises the list of user mailbox documents currently stored on the information appliance.

27. (Previously presented) The method of Claim 1, wherein the information regarding a list of documents stored on the information appliance comprises a timestamp that indicates a last time the synchronization information was received from the remote computer.

28. (Previously presented) The method of Claim 1, wherein the references to documents stored on the remote computer comprise one or more of a Universal Resource Locator (URL), filename, reference number, and an identification number.

29. (Previously presented) The method of Claim 1, further comprising transmitting user identification information to the remote computer prior to the information regarding a list of documents stored on the information appliance.

30. (Currently amended) The computer-readable storage medium of Claim 15, wherein the information regarding a list of documents stored on the information appliance comprises the list of user mailbox documents currently stored on the information appliance.

31. (Previously presented) The computer-readable storage medium of Claim 15, wherein the information regarding a list of documents stored on the information appliance comprises a timestamp that indicates a last time the synchronization information was received from the remote computer.

32. (Previously presented) The computer-readable storage medium of Claim 15, wherein the references to documents stored on the remote computer comprise one or more of a Universal Resource Locator (URL), filename, reference number, and an identification number.

33. (Previously presented) The computer-readable storage medium of Claim 15, further comprising computer instructions that, when executed by an information appliance, cause the information appliance to transmit user identification information to the remote computer prior to the information regarding a list of documents stored on the information appliance.
